SPECIALISTS IN THE EXCEPTIONAL.

VARIOUS FABRICATIONS

LONDON, UK

Sub-contracting for Vinci Construction, Tegrel worked closely with both English Heritage and Vinci to design, fabricate and install various items for the refurbishment of this grade I listed station.

The project involved producing items such as CCTV and speaker brackets, lift cladding and clock housings, all adhering to strict guidelines in order to preserve architectural integrity.

As this project involved working in a live station environment, installation teams were only permitted to work at night and any construction work had to be cleared for passengers the next morning.

Tegrel maintain relationships with Fourways Communications who are responsible for the CCTV, speakers and communications for the station and continue to produce ad hoc items on request.

“The challenge was to integrate the modern assets required for safe 21st century railway operations without detriment to the historic fabric of this prestigious building. Tegrel worked closely with the Principal Contractor in providing innovative bespoke solutions to support structures and housings for specialist communications assets. The discreet CCTV housings developed by Tegrel for wall or lamppost mounting prevented the untidy “bolt-on” effect often seen on railway stations and have been highly praised by the design teams.”

A range of universal brackets specifically designed by Tegrel for this station are being included in Network rail standard catalogue of parts for other stations.
